# Code Challenge #1

Using VS code complete the following task

---

Create a new project named code-challenge-one

Open your **boilerplate.html** file and resave it as **index.html** in the **code-challenge-one** folder.

Inside the body tag, create a <nav> tag with four <a> tags.

The first <a> tag should have the text content of Cats and an href attribute value of #cats

The second <a> tag should have the text content of Dogs and an href attribute value of #dogs

The third <a> tag should have the text content of Rabbits and an href attribute value of #rabbits

The fourth <a> tag should have the text content of Birds and an href attribute value of #birds

Create a <p> tag with a class named content that will have the text content of "This is Code Challenge #1"

Save your file

Create a Compressed Folder version of the **the code-challenge-one folder**

**The compressed folder will be named fastName-code-challenge-one. Where firstName is replaced with your actual first name. It will look like this:**

**firstName-code-challenge-one.zip**

[Upload this zip folder to GitHub](#)
